

Che Wei Chiu

Hi, I'm Ryan

I love traveling and communicate with people from all around the world, due to these traits, I'm into user research and would love to know more about users' needs.

With computer science background, I'm able to use my analytical skills and logical thinking to solve Information Architecture problems such as userflow, sitemap and wireframe.

I use different variety of tools to generate user journey map, information architecture, wireframe, prototype and design system. I also have the ability to build responsive websites by using HTML, CSS and Javascript.
